

# Installing Sharp Print Drivers (Mac)

WEH 4201= 128.2.218.93	MX-2610N
NSH A007= 128.2.181.19	MX-2610N
NSH 1509= 128.2.181.20	MX-4110N
NSH 1100= 128.2.181.21	MX-4110N
NSH 3102= 128.2.181.22	MX-5111N
NSH 4102= 128.2.181.23	MX-5111N

- 1.) Go to: <http://drivers.sharpidnc.com/driversearch.aspx> and choose the unit model on your floor from the list above. Then choose your computer platform and operating system. You will want to download the **PS\_PPD\_10.X.x** type.
- 2.) Save the file. It will automatically go to your default download spot, most likely your desktop or the Downloads folder. You will then want to double click the file and extract the zip files to your desktop.
- 3.) Double click on the MX-C26 program and follow the installation instructions.
- 3.) Go to **SETTINGS** and then select the **PRINT & SCAN** option.
- 4.) Select the **PLUS SIGN** on the left-hand side of the screen.
- 5.) In the **ADD** screen, go to the **IP** tab and enter the IP address that corresponds to the printer you will use most located at the top of this page.
- 6.) Protocol should be listed as: **Line Printer Daemon – LPD**
- 7.) At the bottom of the **ADD** screen, you will want to select the Sharp driver after changing “Generic PostScript Printer” to “**Select Printer Software...**” Select the driver that matches with the machine above.
- 8.) Setting up the printer, you should select the following:

9.) Open a Word or .pdf file (any printable file works) and after going to File > Print, select the Sharp printer in your drop down list. Next, click on the **COPIES & PAGES** tab and select **JOB HANDLING**.

10.) Select the **AUTHENTICATION** tab and enter your copy code under **USER NUMBER**. Then click the lock to the right of the entry bar to keep your code locked into your settings. If you do not do this, the printer will not work the next time you go to use it. Your document should now print correctly.
